I have checked this link- AVR programmer with serial to USB converter

Edit: I want to use a circuit as below with the converted serial (possibly, RS232). Other two lines are TX and RX and wiring for MAX232 is exactly the same as on this circuit diagram: That's when a USB-UART converter appears on the stage.

There are 127 circuit schematics available in this category. I am using a laptop with a usb-to-serial converter, and since that does not provide

Attached is the schematic that works with the burnLVP programmer.

When using the USB to Serial adapter with the DNS-323, you may have to disconnect the red insulated washers against the circuit board. ACIA (Serial interface): Hello World! (which includes a serial interface) and a FT232 based serial to USB converter.

Parallax has designed a USB to Serial (RS-232) adapter that is compact and economical to provide a Virtual Com Port for all of our products that have a DB9. You can see these differences in the schematic of each board: 6pin FTDI FT232RL USB to Serial adapter module USB TO TTL RS232 Cable-in Other. The following adapter is only $5.47 USD and it provides a USB to serial converter chip: Below is a wiring diagram illustrating how to connect the USB to serial.
